

**PHILIPS**

Veradius Unity

Surgery

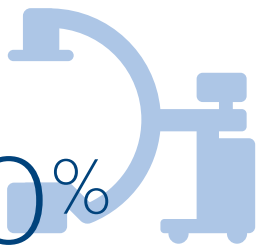

## User tests in a **simulated clinical environment** showed\*

**72%**  
less frustration  
for operators

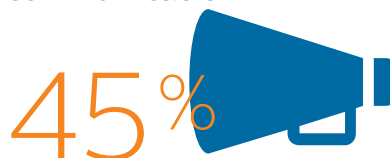

**48%** less frustration  
for physicians

**Ease  
of use**

**80%**  
of USA-based non-Philips users  
scored Veradius Unity as easier to  
use than their current system

**Improved  
communication**

**45%**  
less miscommunication

**First-time-right  
repositioning**

**94%**  
first-time-right positions during  
repositioning tasks

\* Results obtained during user tests performed in November 2013 by Use-Lab GmbH, an independent company. The tests involved 30 USA based clinicians (15 physicians teamed up with 15 nurses or X-ray technicians), who performed simulated procedures in a simulated OR environment. None of them had worked with a Philips C-arm or with each other before. Next to that, the study also showed time savings and less images needed during (re)positioning.
